

eFMS Portal – Modification Requirements

The following changes are required in the eFMS portal based on the testing and review.

1. Add a bulk user creation option for Super Admin using Excel/CSV.
2. Allow users to add a notesheet while forwarding a file.
3. The “Forward To” user should be selected only once on creation time.
4. Add a Delete option for users along with Active/Inactive status.
5. Clear the notification count after the notification is viewed.
6. After a file is forwarded, the attachment delete option should not be available.
7. Remove the duplicate attachment download option.
8. Show the latest note at the top with an automatically generated increasing serial number.
9. A file should not become read-only after two exchanges between users. Further action should remain possible until the file is completed/closed.
10. Attachments in the tracking/history section should not be downloadable, even by the person who uploaded them.
11. Attachment downloading should be available only to the current holder of the file.

Expected Result

The above changes should improve the file forwarding process, prevent unauthorized attachment access, and make the eFMS portal easier to use.
